NATIONAL RESIDENTIAL DATABASE

Our National Residential Database includes information on over 250 million living units nationwide. You can choose based on demographic and geographic elements of prospective customers, guaranteeing that you are targeting the most receptive consumer audience without wasting valuable time and money on misdirected marketing campaigns.

This database is created from of public and proprietary sources. The National Residential file offers a surplus of information readily available for use by direct marketers in a wide variety of categories including dwelling type, telephone number, income, age, occupation, ethnicity, credit cards and marital status. This list is continuously updated to provide you with the newest, most precise consumer data available today.
